

## Elution Buffer, pH8.5 (DNase Free)

### Introduction

Elution Buffer is commonly used for dissolving genomic DNA, plasmid DNA, and DNA fragments. This product is commonly used for nucleic acid dissolution in column kits or magnetic bead kits.

### Formula

Formula: 10mm Tris, pH 8.5

After being prepared with ultrapure water, sterilize under high temperature and high pressure.

### Ordering Information

CAT.No.	Product Name	Package
C452	Elution Buffer, pH8.5	200 ml

### Specifications

Application	Dissolve DNA. Long term DNA preservation
Packaging	Polypropylene plastic bottles
Component	10 mm Tris, pH 8.5
Volume	200 ml
DNase	No detected
RNase	No detected
Sterilization	Under high temperature and pressure (121°C, 20 minutes)
Storage conditions	Room temperature
Valid	18 months at room temperature
Impurity	Ultrapure water preparation
